Subject: Information for Director re Velma Morrison Application

Victoria:

Can you print this & give it to Dave for me? Also, please let me know if Dave approves the suggested follow-up by Western and we'll take care of it.

Apparently Dave received a call from Velma Morrison's architect about a pending water right application held at Western. This follows the architect's contact the other day with Western. According to what I was told, he called here to inquire about this application. Sounds like things got rather odd somehow, including an apparent reference by the caller to "paying something extra to take care of this."

The Regional Manager was not here, nor was I - so this all second-hand information.

The call never got beyond the front desk here at Western. Ideally there would have been clearer and more useful conversation at the regional office, avoiding taking up any of Dave's time in this regard. In any event, the caller wanted to go to the top and talk to the Director. That really shouldn't be necessary in this case but sometimes people are rather insistent about doing that.

I will call the architect to discuss processing this application as follows:

Application 63-32619 filed March 2007.

Application proposes shallow ground water (40 ft.) right next to the Boise River upstream from Star.

Application proposes non-consumptive use, closed loop heating/cooling for a building (CH2MHill's old office?), injection well etc.

Can be processed out-of-priority order based on this mitigation plan that also seeks to avoid injury to senior Boise River rights.

Will proceed as above upon hearing ok from Director's office. Or will proceed differently if Director has other instructions.

Thank you for your help, Victoria.

Steve

OK per DRT's call 10/9 @ 4 pm
