Subject: Permit 63-31884

On behalf of Status Corporation of Idaho, this letter requests a change of Condition No. 3 of water right permit 63-31884. The condition currently states "Water bearing zone to be appropriated is from 155 to 185 feet." We seek to change this condition to read "Water bearing zone to be appropriated is 350 to 750 feet". The reason for this change is that the water quality above 350 feet depth at the point of diversion is not suitable for domestic use due to concentrations of nitrate, arsenic, and uranium in excess of primary drinking water standards. Water quality between 350 to 750 feet meets primary drinking water standards.

Please contact me with any questions.

Sincerely,

Terry M. Scanlan, P.E., P.G.
