Cindy,

I would like to alter the condition to be sure that the school district's actions are consistent with its permits. Can you recommend to Mr. Ames to submit a request? If you support his request with a short memo explaining why the data logger isn't needed and what alternative will be implemented, we can probably do a quick order to make the change.

Shelley

Shelley - Neither Allen nor I had heard from Rick Ames with Jerome SD, so I called him this morning. The SD is in the process of getting flow meter purchases authorized, and I think they will likely purchase mag meters anyway. Based on the info in my memo that I sent you on the 5th (or 6th?), do you need a condition change request from Mr. Ames at this point, or could we possibly modify the permit condition upon licensing? I've only recommended that we drop the data logger requirement, keeping an alternate flow meter condition in place.

FYI, because the SD is pursuing the meter installations diligently, I told Rick Ames today that diversions from the elementary school heat exchange wells could occur from now until a flow meter is installed. Heating requirements should be minimal for the next month or so.

Cindy
