Subject: Johnson Transfer

Steve,

Attached are scans of the receipt and date stamped first page of the transfer as requested.

Also attached is a jpeg-format image showing the place of use relative to QQ-tracts (be sure that when you print the jpeg that you choose to "fit to page"). As you can see the area is larger than approved and distributed among the tracts different than applied for. An additional concern is that the pivot tracks onto BLM land at the north end of the arc and it appears that water is applied to those BLM tracts.

One solution to the acreage distribution is to submit an edited 1st page with Ted Johnson's initials and dates on the edits. It appears that the 1 ac in the NWNE should be added and that the 6 acres in the NWNW should be reduced to 5. This would mean repositioning the pivot stops in the field to prevent the extra travel of the pivot. Another solution is to replace the entire application with a signed, notarized form.

Please provide an explanation of how irrigation and trespass on the BLM land is prevented in the operation of the irrigation system. Also, please provide an explanation of how the pivot is equipped to run on 300 gallons per minute (0.68 cfs), rather than a more typical 900 gpm.

I look forward to receiving the edited transfer and additional information,

Doug Jones
