1. jharris 8/27/2007 Field Report Narrative

Comment: Water under this right was found to be put to beneficial use for irrigation purposes in the SESWSE 1/4 of section 2 township 07N range 02E . The point of diversion is the Payette River located 0.4 miles West of the place of use in the NWNENW 1/4 of Section 11 Township 07N Range 02E. The water is pulled from the river by two slave pumps, diverted into 10" pipe and transported to the place of use powered by three pumps of 100/50/25 HP respectively. This pipeline is a shared POD providing water for several other rights in the subdivision and tapers down to 6" pipe as it moves up the hill. The users tied into the pipe at the Eastern tee of Waverly drive with 3" pipe that heads West down the North side of the road to the intersection with Deke Drive. A pump is located here next to the pond as well as a lockable shut off valve. The pipe line crosses the road and follows the NW side of Deke Drive where it continues on around the perimeter of the POU. The Eastern two acres are watered by five hand lines with 30 - 1/8" heads. There is a pressure gauge located on the North end of this section. The West three acres are watered by a movable hand line that uses 15 - 5/32" heads. There are two shut off valves used for maintenance of the line on the Northern edge of the property. This line continues on West to provide water for right # 65-22725. The flow rate was measured using a Fuji ultrasonic flowmeter and found to provide 0.27 CFS which is enough to give the necessary 0.22 CFS for the two rights.

9. dnelson 11/7/2002 Legal Notice Remarks

Comment: Applicant agrees to mitigate consumptive use in the future as needed.

10. dnelson 11/7/2002 Comment/Analysis

Comment: The applicant proposes to use an existing irrigation system from water rights 65-2858A, 65-2858B, 65-9417A, 65-9417B, and 65-10963 to irrigate their property from the Payette River. The above water rights irrigate separate lots within the same subdivision, but does not supply water to the applicants property. The only water right currently used to irrigate their property is from Hill Creek under water right 65-3803C. The Hill Creek water is not sufficient to irrigate all of their property year round, so the applicant are requesting to tap into the Payette River system the borders their property. I have sent a comment letter to the subdivision to ensure that this use of their system is acceptable, but I recommend that the condition not granting an easement is incorporated into the permit conditions.

11. dgibson 2/18/2003 Permit Review

Comment: It appears that the applicant is going to continue use right no. A65-3803C diverted from Hill Creek to irrigate the same place of use.

A written agreement is on file which documents agreement with the applicants and the owners of the main line diversion for this subdivision, O&D Partnership, stating that a

control valve will be installed on the branch line originating from the main line for this water right. This agreement includes W.R. No. 65-22725 in the name of Ken McKay, who also will tap into the main line for his water right.

This permit is being issued with the remark that it does not grant any right-of-way or easement across the land of another.
