Re: license review

While reviewing this file for licensing, I found the following worth noting:

Neither the POD nor the POU had been created prior to my review. I created them based on the field exam notes and map.

The beneficial use field exam was done unaccompanied. Neither permit holder nor their representative were available. There was no residence on the property at the time of the exam. The examiner states that his flow calculations were obtained by phone interview with person who installed and maintains the system.

The system design capacity is larger than the amount requested in the permit. So the permit amount limits the max diversion rate for the license.

The domestic use condition restricting the diversion to 2500 gpd was added because there was no residence.

Although water appropriation by this right will effect both Lake Pend Oreille and Pend Oreille River, I added a minimum flow condition for the Pend Oreille River only.
