Re: license review

While reviewing this file for licensing, I found the following worth noting:

Neither the POD nor the POU shapes had been created prior to my review. I created them based on the field exam notes and map.

The field examiner found that the irrigation system lines and heads were buried and no flow measurement was possible. The maximum flow was establish by a theoretical calculation based on system operation parameters and was confirmed by the permit holder.

The Pend Oreille River has an established minimum flow requirement so I added a condition to license which addresses that requirement.
