

TO: WATER RIGHT - 77-14280 APPLICATION FOR PERMIT FILE

FROM: DANIEL A. NELSON

DATE: 7/10/2007

SUBJECT: PARALLEL PROCESSING MEMO

This application for permit is the result of the suggestion Erin Retelle made to the applicant to remove the irrigation component from the amended version of 77-7161, and to file this second application for the irrigation for this property. The irrigation use from this application will use the same delivery system, and when combined with 77-7161 will be limited to 2.00 cfs.

Whereas, all of the Wild and Scenic information sought in application 77-7161 included this irrigation use, it has been determined that no further requests should be made of the applicant concerning the Wild and Scenic additional information requirements. All of the necessary information is included in the information for 77-7161. Cheri Padilla requested that I copy the responses from the other agencies from water right 77-7161 into this application file, which was done. Our office feels it is not necessary to request the same information twice from this applicant. The applicant has gone through quite an ordeal to get his water uses covered under 77-7161 and this application, so we feel it would be unfair to prolong the processing of this application any further. Therefore, please review the information and memos written for 77-7161 and apply them to this application.

This application has been data entered into the Wild and Scenic spreadsheet, and the proper advertising remark will be included during advertising.
