Re: Amended Map for Transfer Application #73707

Dear Ernie,

The USDI Bureau of Land Management (BLM) recently filed a protest to the transfer application referenced above. It is our understanding BLM disagrees with the map submitted in conjunction with the transfer application because the outline of the proposed place of use includes BLM land.

BLM owns the land in the SENW, S20, T15N, R21E. The combination of the 2006 NAIP photo and the projection used for the 40-acre tracts in this area appears to place an edge of the existing pivot on this land. It is not the applicant's intention to use his water rights on BLM land.

I have enclosed an amended map to be associated with transfer application #73707. The transfer does not seek to place the applicant's water rights on BLM land; the amended map should clarify the application.

Sincerely,

Roxanne Brown
