Gary,

I have made the changes to the memo you requested. The memo now points out that Attachment 1 was not used in the calculations and that attachment 3 was the source for determining the flow rate of well #2. I believe this should avoid any further confusion caused by attachment 1. I have also changed the flow rate for fish propagation to reflect what was measured during the 1985 field exam (0.08cfs). This did not change the total diversion capacity, however it does reflect what was actually used for fish propagation at the time of the field exam.

I have attached a copy of the memo and draft license 47-7478. The revised memo should replace the old memo scanned under both water rights (47-7478 and 47-7606), the old memo is listed as an "Informational Memorandum" with document date:4/9/2007. The draft license was not scanned but should be printed off and replace the draft license in water right file 47-7478. Let me know if I need to do anything to help make these changes.

If you have any questions or have any other recommendations please let me know.

Thank you,

Nathan
