Re: Transfer Applications in the Pahsimeroi Valley

Dear Ernie,

During a recent telephone conversation, IDWR asked SPF to clarify several transfer applications for participants in a conservation project being managed by the Custer Soil & Water Conservation District. The project seeks to eliminate diversions into the Ellis ditch at the so-called P-9 diversion.

Originally, it was thought the transferred water rights should continue to show both old and new diversion points to allow participation in the Idaho Water Transaction Program (IWTP). Upon review, IDWR has decided only the new point of diversion in each case should appear on the transferred rights to avoid confusion in the future. It is my understanding the IWTP supports this new approach and the change will not impact participation in the IWTP program.

Attached is an amended "Page 1" for each application. The only changes are at Item B.3 and Item B.4. The source of water shown is now the new and only source, the Pahsimeroi River. The point of diversion shown is now the new point of diversion only.

By this letter, I am also sending a copy of each of the applicant's "Page 1" to them directly. Please contact me if you have questions concerning these amendments.

Sincerely,

Roxanne Brown
Water Rights Specialist
