ok

If I recall the situation correctly, the draft license does not look like what we are proposing. That domestic well is one of the things that Vic and I were working details out for. Without looking at the info that has come in from him, I can't tell you whether the domestic well will be or won't be included in the license process. I can plan to look at the file a bit on Monday to try to see where we are in the process, then I'll give you a call to discuss. Will that time table work for you?

Sharla:

I'm still scratching my head over the correct wells to show for the Simplot situation. I compared the 3/11/96 gps memo to recommended wells in draft license 61-7170. Looks like wells 1-7 are recommended for the license. Apparently wells 8 & 12 are out of the picture since capped. Well 11 is just for domestic use per note in left margin of gps memo? Well 10 in SWSE S31 should be included as an irrigation well in the PPOU?

If my assumptions are correct, all the rights in PPOU should include wells 1-7 and 10 for irrigation use. Perhaps 61-7170 will also include well 11 just for domestic use? If so, is that a split from -7170 for a separate D/1 system?

If you could clear this up (maybe I should visit at SO if too hard to clarify in emails etc.), then I can talk to Vic to see what he wants to do. The 1995 transfer proposed to add a well to the system but not sure if that is a new one to be drilled (which would probably mean pulling -7170 into the transfer once licensed) or just inclusion of an existing well not already listed in the PPOU rights except maybe for -7170.

Whew! Now I'm confusing myself. Hope you can shed some light on this.

Thanks.

Steve
