Subject: Status of Applications

Hello Shelley,

I have been trying to find out the status of a couple of applications for permit involved in Parallel Processing (basins 77 and 78). The first application is 77-7161 (Campbell). This application went through the parallel processing and was sent to the State Office on 3/23/2007, and it still hasn't been approved/denied.

The second application is U of I Board of Regents (77-14145). This application has completed advertising, but still needs parallel processing. A parallel processing request was sent for this one on 4/5/2007.

The third application is for Schweich (78-12291). This application is awaiting parallel processing, but hasn't been advertised yet. A parallel processing request was sent for this one on 4/17/2007.

I had all of these water right holder call me around the first of May, so I sent Erin a request for a status update for these applications on 5/3/2007, and didn't get a response. I recently heard that Erin was going to work for SPF, so I am not sure if she is still working there or not. So, I thought I better drop you an email and see if you can tell me where these three applications are in the process. Since I haven't gotten back to them for three weeks, I am guessing I am going to be getting some heated telephone calls this week or next. I would really appreciate some idea of how things are going on these applications.

Thank you.
