The diversion system that would be utilized for this new water right is an existing system consisting of three groundwater wells that currently divert water for water right 63-11054. Well #1 is approximately 210 feet deep, with 6-inch casing, two galvanized pressure tanks, and a 3 h.p. submersible pump. Well #2 is approximately 202 feet deep, with a 6-inch casing, pressure tank, and a 2.5 h.p. submersible pump. Well #3 is approximately 280 feet deep, with 6-inch casing, three pressure tanks, and a 5 h.p. submersible pump. Water is pumped from these three wells into an interconnected system that supplies water (i) for the watering of dairy stock, (ii) to a large milking barn, milk storage facility, and office for commercial use, and (iii) to two residences for domestic use. The water diverted for stockwatering is piped to a cooling system, then to a 10,000 gallon holding tank, and is then stored until consumed in twenty-five 200-gallon stockwater tanks.
