Debbie:

Thought these photos might be helpful as proof. The permanent pump was installed in the well in 2004 with a temporary pressure tank installation in the well house set up to serve a single house on the system. This temporary setup was meant to serve the house until the permanent water storage tank was completed the following year. These photos, dated November 16, 2004, show that the well was in operation and supplying a connection to the system. The pictures themselves don't have a date stamp on them, but if you save them to your hard drive and access them in Windows Explorer, it will list the date the picture was taken. *(This was lost when the pictures were sent to me.)*

I am having copies made of the record drawings for the water distribution system and will send them to you. I will also try to get documentation from the contractor that installed the well pump on an installation date.
