Subject: Mann Farms Mitigation

Shelley, I made the SRBA recommendation on right 63-2587B that Mann Farms used to mitigate permits 63-31298 and 63-31664. 13.5 acres were retired for permit 63-31298 and 9 acres were retired for permit 63-31664. The retired acres were accounted for in the SRBA recommendation. Please refer to my comments listed on the claim recommendation for details.

Attached are two affidavits regarding the mitigated acres signed by Kent Mann. Also included is a map prepared by SPF Water Engineering indicating the location of the 22.5 total acres retired for mitigation. Please let me know if you need more information Shelley. lg

Subject: Revised Mitigation Plan for Application for Permit

Dear Ms. Graves:

As mitigation for the Application for Permit submitted to your office in February 2003, Mann Farms will permanently retire from irrigation one acre in the NESW of Section 25, T6N, R6W and 8 acres in the NWSE of Section 25, T6N, R6W. These nine acres have been irrigated using water diverted under water right 63-2587 (claim A63-2587B).

- The one acre in the NESW was part of a 14.5-acre area converted to feedlot in the fall of 2001. The other 13.5 acres of this 14.5-acre area were used as mitigation for permit 63-31298.
- The 8 acres in the NWSE are part of a 20.7-acre area converted to feedlot after the 1996 irrigation season. These 20.7 acres were the subject of an application to avoid forfeiture that was approved on February 7, 2002.

The 9 acres of irrigation water right proposed for mitigation are based on the 933 mm (36.73 inches) consumptive irrigation requirement for alfalfa hay calculated for the Parma Experiment Station by Allen and Brockway (1983). Alfalfa hay has been grown on these acres as part of the typical crop rotation over the past 60 years. At 36.73 inches per acre, the annual consumptive irrigation requirement for 9 acres of alfalfa hay is 8,976,000 gallons. This annual consumptive irrigation requirement slightly exceeds the estimated stockwater diversion requirement of 8,760,000 gallons proposed by the application for permit.

Sincerely,

Kent Mann
Mann Farms
