

RECOMMENDATION OF WATERMASTER

Application No: Application for Permit
Water Right No: 37-21771
Applicant Name: Standal

Watermaster's Recommendation:

- a) ☐ I do not oppose approval of this application
- b) ☒ I do not oppose approval of this application if it is conditioned as follows:

WD130 inclusion and watermaster jurisdiction
Total permit limit should be 3.05 (see comments)
Measuring devices / lockable control works as approved by Watermaster
Diversions for power production must first be diverted and used for fish propagation.

- c) ☐ I oppose approval of this application(s) for the following reasons:

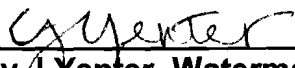

- d) ☒ Additional comment:

This system recently added to WD130; existing works are reporting diversions although additional or upgraded devices might be required. 2006 reported diversions at lower pond (just upstream from power diversion) range from 6 to 9 cfs.

Right no. 37-7218 seems to have been missed in the analysis. This right is for what appears to be an additional 0.26 cfs diverted from the springs at the upper ponds. Therefore with the additional 4.0 cfs waste water at the lower pond, the combined diversion is 8.26 cfs, less 5.21 already licensed for power = 3.05 cfs for this permit.

Dated: March 20, 2007

Water District 130

Cindy J. Yenter, Watermaster
