 43-4130B Parcel IV

****Transfer should be based on the above recommendations although the application and current database do not reflect this.

SUBJECT: Review and Recommendation

This transfer creates a large PPU of 1080 acres and ties 5 existing wells together to service the PPU. The rights were recently reviewed by SRBA and recommended in four parcels with separate wells. Attached are proof reports of the recommendations. The when combined provide 12.25 cfs for irrigation of 1010 acres with 3224 afa. The lands also have some surface water.

This transfer was initially filed with only a portion of the rights being identified then it was amended to include a larger PPU. The processing of the transfer has spanned over the time of the development of workflow and data migration. An effort has been made to data enter the transfer onto the new data base as best we can but it keeps failing at this point. Data entry will need to be corrected &/or reviewed. No final GIS work has been completed on this transfer although John Frietag created maps using arcview.

The transfer was processed without protest.

Recommendation

I recommend that this transfer be approved subject to the following conditions:

- Since the PPU is larger than the allowed irrigated acres I recommend that the owner be required to report at the beginning of the irrigation season the acres intended to be irrigated from the wells as well as the acres to be irrigated from surface water.
- No new wells are authorized to be developed under this approval.
- Install measuring devices with totalizing meters on all wells. Measure and report use to department if requested in future.
- Acreage limitations for rights consistent with recommendations.
- Limit use with surface water rights identified with recommendations.
