Subject: Permit 02-7113

Hey Kay, per our telecon, please include 30 acres in the SESE S17 T5S R3E on my licensing recommendation for permit 2-7113. The 30 acres are indicated as irrigated on my field exam map, however I erroneously did not count them in the recommended p/u. Total for irrigation should be 257 acres rather than 227. As a result, licensed rate of diversion should be 5.14 cfs (system capacity is 6.47 cfs). Also, volume should be based on 4.5 af/ac rather than 3.5 af/ac as listed in the report. This makes licensed rate of volume 1156.5 af for the 257 acres. Season of use should also be changed to 3/1 to 11/15, which is the standard for that area. Let me know if these adjustments require anything else on my part in addition to this email. Thx Kay. lg
