RECOMMENDATION OF WATERMASTER

Application No: 73156
Water Right No: 36-14759
Applicant Name: Roth Investments

Watermaster's Recommendation:

- a) ☐ I do not oppose approval of this application
- b) ☒ I do not oppose approval of this application if it is conditioned as follows:

36-7894B is also diverted through points of diversion listed above.

* Diversions under 36-14759 are limited to in-house use for one home, irrigation not to exceed one-half acre, and the watering of stock which are kept within the SESW Section 11.

~~A separate flow meter shall be installed on the line to the home.~~ ^{Strike} 

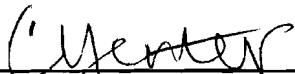

- c) ☐ I oppose approval of this application(s) for the following reasons:
- d) ☒ Additional comment:

The transferred domestic pou is at the Roth's White Clover Dairy. The home was moved onto the dairy during the summer 2006 and was hooked up to the existing commercial system (D0008595 and D0008596). All diverted flows including those for this domestic use, are commingled and measured prior to distribution.

There needs to be some limitation on total additive volume when this D/S right is used with 36-7894B, in order that historical domestic use is not enlarged and the dairy operation does not receive "free" or assumed water, which could total almost 10% of its present water right. Actual uses related to the domestic right can be isolated from the dairy by virtue of the place of use, because the home is in a different QQ than the dairy. However the total volumetric diversion can only be isolated if there is a separate meter installed on the supply line to the home. That way even if some stockwater use were to occur under the domestic right (ie calf pens) it could be associated with the home and not the dairy.
