Dear Sharla,

Per our telephone conversation on 11/29/06 following are the items you informed me I need to respond about.

In order to comply with the rules and regulations concerning water I have made application for an irrigation well to water my 1 1/3 acre tract of land. The amount of water is .03 cfs and I will be irrigating only part of the year. After talking with my neighbors I believe the potential for reducing the amount of water in this particular area is very minimal as most wells are producing about 30 gpm. Based on existing well information in the area there is more than an adequate supply of water for the purpose proposed. I intend to have this well completed by the end of 2007. Based on the costs of the domestic well I just had drilled, this well will cost approximately \$2000 to drill and I would not think more than \$50 dollars a year to operate. The well will be paid for in cash as the last one was. My wife and I both have retirement incomes that more than cover the cost and operation of this well.

I hope this addresses all of the items in a sufficient manner. If you need more information please let me know. Thank you for all your help in getting this done.

Sincerely,

Jack Petty
