Gooding Soil Conservation District, sponsor
Cliff Jensen, landowner
Norval Awalt, landowner

The North Side Canal Company would like to express its appreciation and dedication to the partnership with the Gooding SCD and landowners Cliff Jensen and Norval Awalt with the Malad Gorge W - Drain water quality project. The North Side Canal Co. (NSCC) is dedicated to the maintaining and improving of the water quality of agriculture return flows to the surface waters of the State. Our contribution in this project will be limited to monitoring the end of the W Drain at the Riddle property on a biweekly schedule throughout the irrigation season and we will extend this same schedule of monitoring to the new storage pond to be constructed in the Malad Gorge State Park

It is our understanding that the USDA-NRCS is providing all engineering for the structural improvements of this Project and that the designs will be reviewed and approved by the Idaho Department of Water Resources prior to and during construction. As this construction is not located on NSCC property and we have not influenced or assisted with any engineering design, the NSCC does not assume or accept any liability related to this Project.

We are confident this Project will have an overall positive impact on the water quality of the return flows to the Malad and Snake River system.

Sincerely,

Larry Pennington
