Subject: Transfer 69699

Jim,
I was checking the status of 36-2324 and noted that there is a pending transfer (no. 69699) which includes 36-2324. The transfer application points to the WR version of the right, even though there is an active recommendation (due to irrigation season amended decree and a supplemental decree based on an earlier transfer). The decree that exists in WR is not the most recent record and should not be used for the transfer. The SRBA status of any record should always be checked prior to data entry of a transfer. In this case, the recommendation should have been updated by AJ, then moved to WR to replace the existing WR record. As it stands, the transfer approval will update the existing WR and then be totally overwritten by the recommendation when it gets moved and updated. Or, the recommendation will get updated and moved to WR prior to the transfer approval, potentially messing up the transfer application.

Don should be informed of the pending transfer, and asked to update the recommendation based on the supplemental directors report, and then move the record to WR. Once moved to WR, the transfer application can be clean up.

Let me know if you have questions.

Jeff
