Dear Mr. Ferrell:

We received your recent letter concerning the replacement well you recently drilled under your Permit No. 96-7315.

This well allows for the diversion of water from any ground water source to be used for domestic purposes. This domestic purpose would include up to $\frac{1}{2}$ acre of irrigation.

There does not appear to be any reason for you to file for an additional permit for this new well, however, you may wish to consider amending the permit to include both of the wells, if you plan to continue the use of the hand dug well. That amendment would enable you to use either of the wells for domestic purposes up to the 0.04 cubic feet per second allowed on the permit. We have enclosed an amendment form if you wish to amend this permit.

We also remind you that the proof of beneficial use is due on this permit on or before October 1, 1977. If you have any questions or if we can assist you, please feel free to contact us.

Re Permit

RECEIVED

96 7315-

AUG 4 1977

Department of Water Resources

Received your certified mail on Water Permit # 96 7315. In May of this year, I had a well drilled approx 12 feet from existing hand dug ~~well~~ well. The original hand dug well is 23 feet down - The new drilled well is 43 feet deep with screen at the bottom. At 38' level there is approximately 2 feet of clay, then back into gravel again. Supposedly both wells are from different water sources because of the clay in between.

Question

Should I apply for a new water permit on the new drilled well? The one will be the primary water source. Reason for the new well is explained on next page.

UNRECORDED

✓

2 The hand dug well^{is} down to 23 feet & had but hard pan. The fluctuation of the Pond Drills River Summer & winter (height of the river above sea level) cause, or not to, the back pressure against the stream that leads to the bottom of the well. This has a lot to do with the amount in the reservoir of the well at different times. I don't think that it is river water as the stream has been switched from the hills behind down to the well & out approx 265 feet into the river. This well is used for irrigation mostly, and should permit be executed on this one.

I refer to question asked on previous page and await your reply.

Thanking you.
