Dear Mr. McGregor:

One of the conditions of approval of your water Permit No. 96-7053 (see last page of your approved permit) was that evidence of the extent of development be submitted as proof of application of water to beneficial use to this office on or before October 1, 1977. Enclosed is an affidavit form which must be used to submit the required proof of beneficial use.

If you have not fully completed your project, and you have not previously received an extension of time, you may request an extension of time provided the delay is for reasonable cause as indicated in Section 42-204, Idaho Code, amended. If you have been prevented from proceeding by a governmental agency or by litigation, more than one extension of time can be granted.

Either the beneficial use affidavit or a request for an extension of time must be received by this Department on or before the above mentioned date, otherwise the permit will lapse and be of no further force or effect.

Mr. Raymond E. McGregor

Hope, ID 83836

Dear Mr. McGregor:

We have sent your request for an Extension of Time on Permit No. 96-7053 to our Boise Office for processing. You can expect to hear from them shortly.

This letter is in reference to the type of measuring device you described in your letter. We cannot approve your method of measuring water for several reasons. The water needs to be measured as it is being applied to a beneficial use. If your method of applying the water is to be an enclosed pressurized system by use of sprinklers, then it is necessary to be able to measure the water when the sprinklers are in use. Also, the measuring device needs to be permanently installed on the system.

There are several flow meters currently on the market which are installed directly on the discharge pipe and are capable of measuring water under pressure. You may wish to contact your local Pump Representative for more details.

We have noticed that your permit is in the amount of 0.40 cubic feet per second and that you have described your system as a 2-inch line. There is a possibility that your system will not be capable of pumping the 0.4 c.f.s. If you will be using less than 0.3 c.f.s., then you can request that our Department remove the measuring device requirement based on the fact that your system pumps a lessor amount of water than was originally requested on the permit.

We hope this answers your questions. If we may be of any further assistance, feel free to contact us.

Very truly yours,

FRED EISENBARTH
Northern District Manager

Dear Sirs:

In regard to the extension on the Water Permit, number 96-7053, issued in October 27, 1970, we are interested in the type of metering device needed. We have plans to meter the pipeline by using a barrel at the end of line with known capacity and measure the time it takes to fill the barrel. We were told that this would be permissible. This type of measuring seems to give an accurate account of how much water is moving from the point of diversion through the pipe to the point where the water is used. Will this be permissible?

Another question that has come up; is that when the original application for water permit was sent in, an estimate of the project of 2000.00 was proposed. Due to higher costs, a figure of 3,000.00 dollars is more realistic. Will you update your copy of this.

On filing for continuation of the water permit, we would like these two questions answered or approved by your office.

Sincerely yours, R. E. McGregor
