Ernie,

RE: 21-02166, 21-04000, Mickelsen

I have reviewed the transfer application. The transfer application seeks to remove the 2.0 acres of irrigation use on BLM land (SESW, S34, T06N, R38E) and does not introduce any new issues of concern for BLM. It looks good! Once the transfer process is completed, shoot me a copy of the NCAP.

Thanks Ernie,
Fred

RE: 21-02166 and 21-04000; Claimant:
Don Mickelsen

Larry, Don has filed an application for transfer to omit the federal land from the place of use and points of diversion for his water rights. I will ask allocations to give this application prompt attention for advertising and regional processing. Provided it is not protested, I expect it will take a minimum of two months in order to complete the advertising and obtain the necessary signatures at the state office.

I have included a copy of the application so you can review the change in place of use and verify it will resolve your concerns.

Ernie

I just talked to Don on the phone and confirmed that he wishes to delete the public land from his water right, but he also told me that he had filed for a transfer to move the water to his own private land. Ernie - please confirm and let me know how long this will take to complete.

Fred: sorry, I pressed send too soon. I failed to put you on the cc on the first e-mail. Don said he had a survey done 10 years ago and knows where public land is, and he is willing to replant with native seed. Have someone from the field office visit with Don and provide the native seed.
