REFERENCES AND COMMENTS:

Area Capacity table dated March 1967

¹ Elevation obtained by flood routings of 1983 PMF loading. Above elevation 5621.0, high releases through the spillway may create unfavorable flow characteristics in the tunnel. This causes concern for the reliable operation of the spillway. (June 1999, Comprehensive facility Review). Maximum unscheduled surcharge used in the past has been to elevation 5621.0, 16200 acre-feet.

² Surcharge obtained by extrapolation from elevation 5620.0 to elevation 5626.4

The top of the dam's impermeable core is at elevation 5625. Reservoir water surface elevation above 5625 could potentially erode core material.
