MEASUREMENT CALCULATION:

SYSTEM DESCRIPTION:

Water from Experimental Gulch is impounded by a 4' concrete-earth dam. (2) 18" perforated pipes lie under a gravel filter and collect the water which is conveyed to a 6' concrete tile. From the tile, a 12" steel pipe transfers the water downhill approx. 1000' to the main line. The 12" mainline then goes approx. 1 mile to a 750,000 gal. storage tank. Wallace water supply consists of water from Experimental Draw, Chanky Gulch, West Fork of Placer Cr. and Placer Cr.

REMARKS:
The Q diverted from Experimental Gulch varies depending on need and availability of water. At time of exam very little water was being used, therefore the Secbey Formula was used to determine the maximum capacity of a 12" steel pipe 1000' long with 90' of head. (See above)

Re: Permit No. 94-7009

Citizens Utilities Company
612 Cedar Street
Wallace, ID 83873

Gentlemen:

One of the conditions of approval of your water Permit No. 94-7009 (see last page of your approved permit) was that evidence of the extent of development be submitted as proof of application of water to beneficial use to this office on or before January 1, 1975. Enclosed is an affidavit form which must be used to submit the required proof of beneficial use.

If you have not fully completed your project, and you have not previously received an extension of time, you may request an extension of time provided the delay is for reasonable cause as indicated in Section 42-204, Idaho Code, amended. If you have been prevented from proceeding by a governmental agency or by litigation, more than one extension of time can be granted.

Either the beneficial use affidavit or a request for an extension of time must be received by this Department on or before the above mentioned date, otherwise the permit will lapse and be of no further force or effect.
