SUBJECT LAMAR WHITE - FLOWING WELL

I inspected the well site on 8/3/82 and again on 8/5/82. The claim that water is gushing forth at 20gpm is not correct. Water is seeping from under the concrete pad (≈ 20'x25') in a southerly and westerly direction at a flow of less than 1 gpm. There is a marshy area in the ditch to the south and in a parallel ditch to the west of the pump. I feel the surface seal is adequate to prevent contamination and presents no hazard to health

RE: LaMar Whyte Artesian Well

DATE: February 8, 1982

Prior to issuing a license for this permit, we had been asked to find out if the well construction problem with Mr. Whyte's artesian well had been properly repaired.

Several attempts were made to contact Mr. Whyte by telephone but were unsuccessful. On February 5, Keith Wilson physically inspected the well site and found water flowing from beneath the southeast corner concrete pad adjacent to the well. He estimated the flow to be approximately 20 gpm. Based on Keith's findings, it appears that Mr. Whyte's well has not been properly sealed.
