Ques. 4. State source of water supply, place of diversion, and describe works for conveying water from point of diversion to place of use.

Ans. Subterranean flow from well. Diversion point is in SW $\frac{1}{4}$ of SE $\frac{1}{4}$ of Sec. 28, Tp. 4 N, R 37 E.B.M. in Jefferson County, Idaho. Works for conveying said water consist of 200 h.p. electric centrifugal pump attached to some 280' of 10" vertical column in the well. Well is approximately 370' deep. The water emerges through a 12" discharge valve into steel mainline pipe and thence is conveyed to the lands by means of some 10 strings of aluminum lateral pipe equipped with 320 sprinklers with 5/32 nozzles and having some 35# pressure. The depth of the water from the pump is about 260'.

Ques. 5. How many second feet of water do you estimate said works will safely conduct to place of use, and how much water have you seen being so conveyed?

Ans. 4.8 second feet. I have observed 10 strings of quarter mile laterals fully operating from such works at what I would judge to be approximately 35# pressure.

Ques. 6. (Pumps) How much water in cubic feet per second, miner's inches, or gallons per minute have you seen the pump deliver, and how did you measure or estimate the amount?

Ans. It looked to me like more than 240" of water was diverted by the works on the test run I saw.

Ques. 7. State for what purpose water is used and at what place. (If for irrigation, give each subdivision in which water has been used and number of acres irrigated in each subdivision.) State whether cultivated or natural meadow land and the nature of all improvements which have been made as a direct result of said use.

These lands so watered are all cultivated lands and the use of this water has increased and promoted their productivity.

Ques. 8. If for power or other purposes than irrigation, state how water has been applied and to what extent.

Ans. Water used only for irrigation purposes.

Ques. 9. (If for irrigation) state character of land that has been reclaimed, and give your estimate of the amount of water required for its profitable cultivation.

Ans. Cultivated lands reclaimed from dry lands totaling 240 acres and I estimate it will require about 240" of water for its profitable cultivation.

Ques. 10. Have you any interest in the works, water or lands above mentioned? If so, in what way and to what extent?

Ans. No.

Ques. 11. State when, how, in what amount and to what extent you have witnessed the application to beneficial use of water diverted under said permit.

Ans. In September of 1962 I witnessed a test run of the works where sufficient water was diverted from the well to insure at least 1" of water per acre for irrigating all the 240 acres of lands described by the permit.
