Re: Well on the Karcher Interchange Site - City of Nampa

Dear Shelley,

The City of Nampa intends to take over for continuous operation and maintenance a ground water well at the Karcher Interchange being developed by ITD. This well will be interconnected and will become an integral part of the City of Nampa municipal pressurized irrigation system.

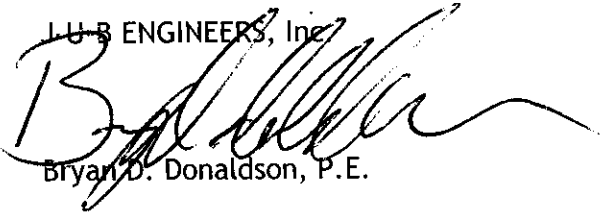

The City of Nampa operates two complete water supply and delivery systems. One system is utilized for pressure irrigation throughout the community, and the second is used for providing culinary water throughout the community. The City of Nampa must have both systems. The City's existing culinary water system is not sized to provide irrigation flows at any time during the year. Therefore, it is imperative that the City of Nampa continue to utilize the dual systems. This well will become an integral part of the system.

Attached is a copy of the most up to date City of Nampa pressure irrigation master plan map. To accommodate the inclusion of the well at the Karcher Interchange a main 8" grid line was relocated from its planned location in Northside Blvd. to North Midland Blvd. This will allow for the interconnection to the pressurized irrigation system grid along Karcher, Ten Lane, North Midland Blvd. and West Cherry Lane. These interconnections will markedly improve the level of service for both the pressurized irrigation system and culinary water system in this area.

If you have any questions, please feel free to contact me.

Regards,

J-U-B ENGINEERS, Inc.
