Subject: Water Right Permit No. 95-9219, Waiver of Measuring Device Condition

Erin,

Re: Larry Isenberg, Water Right Permit No. 95-9219.

Mr. Isenberg recently filed a Proof of Beneficial Use for his permit, since all the work he plans to do is complete. Proof Due Date is 4/1/2009.

Condition No. 4, for his permit, calls for the installation of a measuring device and locking control structure. The locking control structure has been installed and is very satisfactory, however, Mr. Isenberg is requesting a waiver for the measuring device condition. (His letter making the request was attached to the Proof of Beneficial Use form, that has been forwarded to the State office)

Greg Taylor and myself met with Mr. Isenberg on site and support his request for the waiver. His water right is mainly for a storage pond that is designed so the diverted creek water flows through the pond and re-enters the creek. No other diversions occur between Mr. Isenberg's diversion and where the diverted water returns to the creek. There is an irrigation element within the water right for the irrigation of 1.5 acres. In all actuality, he's irrigating less than 1.0 acre. A flow meter could be installed on the discharge side of his irrigation pump, however, I do not believe it is necessary.

I believe the reason a measuring device was originally conditioned was the permit fell within State Water District No. 95. A water master was suppose to be appointed to regulate diversions for that district, but never was.

Any questions, don't hesitate to call.

Thank you.

Keith.
