Re: Water Permit No. 95-9219

Keith,

Thank you for checking out our water permit and giving us excellent advice.

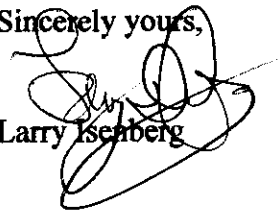

This letter is written to request a waiver on having to install a measuring device on our water diversion since we are just running the water through a pond and then back into the source water, Cougar Creek. This is a flow through system with a primary purpose of keeping fresh water flowing for the trout in the pond. It is all on our own land. Therefore, it seems a measuring device for checking consumption would be unnecessary.

All other requirements have been met, including construction, locking head gate, and screening.

Also, as far as I know there was never any watermaster appointed or for that matter a formal district established for this district, No. 95B.

Thank you for considering this request to waive the measuring device.

Sincerely yours,

Larry Isenberg
