Re: Application to Appropriate Water 75-14272

Dear Mr. Keen:

This letter is in response to your request for more information regarding the aforesaid application.

In regard to the sufficiency of the water supply: This power system has been in operation for a number of years and has never made a noticeable depletion in the stream flow. The system operates year round and diverts 440 gallons per minute. The water that goes through the hydro is then routed back into Panther Creek. None of the water used by the hydro is consumptively used as it goes back into the stream.

Information relative to good faith: The system is for my own use. I own all the property the project uses. I have submitted the affidavit of residency. I don't believe any other license or permit is necessary, but I have contacted The Federal Energy Regulatory Commission to be sure. The person I spoke with said he didn't believe a license was required but I am following up to be sure. I will let you know if there is any change in this information.

Information relative to Financial Resources: The system has been in use for a number of years so no financial burden is anticipated. The system is relatively simple. The water is diverted from Beaver Creek via a screened ten inch pipe into a small pond. In this pond the four inch pipe picks up the water from inside a small stainless steel box which is located inside a larger metal box. These metal boxes are actually screens to keep out fish and debris, which would damage the turbine. The water flows down the pipe approximately 1750 feet to the turbine. The turbine is located in a building along with the battery bank, power center, inverter and other equipment. The water passes through the turbine and goes thru a ten inch discharge pipe into Panther Creek. (Beaver Creek drains into Panther Creek.)

Information relative to conflict with local public interest: I have contacted The Idaho Department of Fish and Game, Department of Environmental Quality and Lemhi County. Representatives of some of these entities have made on site visits and will be sending letters with their opinions concerning any possible conflicts.
