Re: License Review

-22-13457

I created a place of use for the lands Keith recommended on his field exam. The number of acres in each 40 are not exactly the same as Keith found but we came up with almost the same amount of acres for this system. Lands in S1/2NW1/4, S18, T5N, R41E were previously covered under License 22-7071 but have not been removed from this place of use at this time. In further review, the lands in S1/2NW1/4 were covered at 0.015 cfs per acre under 22-7071. If we remove those lands from this proposed license we would have 5.88 cfs on 516.1 acres which could be 0.011 cfs per acre. There would be no benefit to include these lands under this new license since they have more rate per acre under the previous license. Have removed from the proposed license since there is no benefit to include.
