REMARKS: Water can be diverted with small headgate on West Charlie Creek. The water on the main Charlie Creek will need to be raised about 3 feet to a diversion ditch. A small log rock and earth dam will do the job. The water at pump location will need to be raised about 10 ft. Due to uneven topography, long ditches would be impractical.

Dear Mr. Darling:

Statutes requires a field inspection in connection with the proofs on Permit # 24581 before license and certificate of water right can be issued.

Such inspection and report on same is required for any and all permits being brought to license within this State.

An inspecting Engineer from this Department requests that you or someone familiar with the terms of the permit and representing you be prepared to accompany him on the inspection, on ~~either Wednesday, July 31st~~
late in the afternoon, or Thursday morning.

If he cannot get in touch with you by phone or otherwise he will drive to the well location or point of diversion given in the permit.

Very truly yours,
