Re: Place of use

In updating this shape in arc view I had to recreate the shape so that the 40 acre tracts were not individual shapes. When I updated the pls after recreating the shape, I found that the GCBD may have problems. The lands in NENE, S12, 6S, 5E came up as a 42 acre parcel. If I did an identify on the GCBD for that 40 it said it was a 40 acre tract. If I did a select on that 40 arc view said it was a 42 acre tract. I pulled the government lot plats for the areas that arc view updated to more than 40 acres and could find nothing that showed those 40s should be larger. I have gone in and manually changed the 42 and 41acre tracts to just 40s. Arc view found this shape to be 1215.7 acres rather than 1205.7 as identified by examiner. I recommend we license as proposed by field examiner since we have nothing to show differently.
