Describe the reason for the proposed changes

We own both an existing dairy and half a section of irrigated land 5 miles north of the dairy. The dairy is being expanded, so more water is being moved there from the farm. The effect of the transfer on the Snake River is minimal, so no mitigation plan is proposed. Two additional wells will be drilled at the dairy in case the existing wells fail to provide sufficient water. All the wells at the dairy are tied together in a common system. The transfer also more accurately describes the location of the dairy for the existing water rights on the property. Two years of development time are requested due to the variable nature of the dairy business; the barn will be built next spring, but it could take a year or more before full production occurs.

4. FOR CHANGES IN NATURE OF USE ONLY

A. Describe the expected quantity of the return flows and location of discharge after the proposed change

Water will be ponded and land applied as specified in the nutrient management plan.

B. Describe the effects on other water uses resulting from the proposed change

The amount of water used for irrigation will decrease, while the amount used for the dairy will increase.
