- Quantity and quality of return flows and location of discharge: There will be no discharge to other waters.
- Describe effects on other water uses resulting from the proposed change: The change will extend the diversion of ground water, at a reduced daily rate, from the irrigation season to year around. Annual diversion volume from the aquifer will be reduced since only the consumptive use portion of the right is being transferred.

I hereby assert that no one will be injured by such change and that the change does not constitute an enlargement in use of the original right. Place of Use Map for Rhead Dairy Transfer - 61-2215 and 61-7007

Remarks

Rhead Dairy Transfer

This transfer seeks to convert a portion (115 acres) of irrigation water rights 61-2215 and 61-7007 to stockwater and commercial use for a proposed dairy to be built in the current Place Of Use. This transfer will retire 115 acres of irrigated land that has had a consumptive rate of 2.36 ac-ft/ac and use that diversion rate and volume for the 6000 head dairy.

The consumptive rate of 2.36 ac-ft/ac was determined by using the Farm Service Agencies records of cropping patterns from the applicant's farm and the 1983 Allen Brockway report. The value of AVG IR was used for each respective crop planted in 2003.

The footprint of the dairy will require retiring 160 acres of land. There are 45 acres of land that will be ($160 - 115 = 45$ acres) taken out of irrigation from beneath the dairy site. Fifteen of these 45 acres are transferred to the SENW of sec 4 T5S, R6E to make the water right match what that actual irrigation pattern is.

The remaining 30 acres are submitted to the Water Supply Bank in an accompanying application.
