Shelly,

As Watermaster of District 67, I see no reason to have a measuring device on the water caught from Cove Creek. This is a ditch up on the bank of the creek that only catches water that **overflows** the banks of the creek in runoff. No water is taken from the creek otherwise! The water that is caught would flood the claimants fields if he didn't catch in ditch and run to pond.

I hope this helps you and Mark. If there is more that I can do, please let me know.

Bosco Bosler
