RE: Recommended amounts of water for licenses

Date: July 7, 2005

.....

While preparing these rights for licensing I found that the amount of water that can be stored has changed since the field examination was conducted. The right had previously been split, due to an assignment of permit, and the water was proportionately split on land ownership.

In light of this, I have also used the current storage and taken a proportionate share for each license as follows:

Storage of water in both dams = 300.0 af

Total acres irrigated under A & B = 440 ac

300 AF

440 acres = 0.682 af/ac

Part A: 45 ac x 0.682 = 30.7 af

Part B: 395 ac x 0.682 = 269.3 af
440 ac ✓ 300.0 af ✓
