

Comment Report

37-21486

27. amerritt 9/27/2005 recommendation

Comment: Applications 37-21456 and 37-21486 should be processed together since they are related in a common project. Both applications are predicated on reduction of existing surface water right use to mitigate for use of these waste waters. The applications were advertised without protest. I have modified the initial draft prepared by Stanton. Recommend approval as the amended draft provides.

28. kwalker 11/22/2005 Permit Review

Comment: Gave the applicants a chance to submit information stating why they needed more than an inch per acre. They did not respond so have limited permit approval to 1 inch per acre. Water from W Canal either flows into the pond or over the rim into river. No diversion to storage parameter needed per discussion with Jim Stanton.
