Re: Comment/Analysis 2

With regard to the pod, the watermaster described it to me as being on the south edge of the south branch of the Big Wood River (the river splits around a sand island upstream from the Slough). According to ArcView (which we don't know whether it is right or wrong with regard to the 40 lines), this would put the pod in the SW/SE/NW Sec. 22 instead of the NE/SW as shown on the application. Jason has agreed that the north 40 should be shown as the pod, so I will change the application accordingly. This area is closer to the part of this township that has been re-rectified, so hopefully the 40 lines are where they should be.
