Protest: Williams Lake #75-7589/7052

About 757052

This is lake water - not to drink
Can be used for NON-house use
and not for human consumption.

That's why we Built the new
System in 94-95.

If used it needs to be restricted
to outside use only w/ NO
Drinking use.

So all outlets should be marked
"Not Safe to Drink"

and any water rights obtained
cant be exchanged for good Spring
water later - this I suspect is
The Problem also there is no lake water
Pumped or in place since 1995. (11/95)

Now # 7589

In 94-95 Notice was given by
State direction, to the Board that
this System would serve only
those homes existing or permitted
or under construction at the time the
System was approved for use. That was
Sept 1995.

Receipt
E031409

RECEIVED

OCT 31 2005

Department of Water Resources
Eastern Region

(2)

A test of the intent was in
the "Temick" water fight of
the 1998 Times.

Any way - The orig Contract
of D.S.O. and Williams Lake
Should be kept as is at least
until Bonds are paid off.

No outside expansion, No Speculation
no Live Stock, No Lawn water
Nothing, until Storage and Pumps
are updated to leave reserves
that provide for Contact time that
is on line from EPA Soon.
(Ask Health Dept for details)
I'm sure District 7 knows of it.

Also - the resort has been on the
water since 60's, and is specific
wrote into new water system in 94-95.
(See Records)
Board has not provided for them
and Resort wants water from
WL System - Ref. Mr. Davis Oct 20/05
and Papers will be in Evidence at the
VEN Hearing, of that fact.

(3)

The resort needs 3000 - 6000 GPD day
also we need to pump for the
BLM - Forest Service -

Est 3000 gal/day est.
and we have recorded 33,000 Gal
per day already without the
resort etc.

We do not have Storage or
Pump ability to expand this and
should not. Considering it was
built specific for 62 Homes
& Resort etc.

Also - Just for the Record, I built
this system and designed most of
it. - So I guess I know what
went on, and what that system
is.

In short, the Issue is not Water
Rights, it is Storage, Pumps and
Sanitation, Fire etc.

If everyone can go outside with
spring water the system Will Fail
and be low water 24/7.
