Comment: Updated Shape

4. kwalker 9/22/2005 License Review

Comment: The priority date of this right was data entered in error. The permit showed a priority date of 2/6/1996 but the application was not received or receipted until 2/26/96. Have corrected entry of this date. There are no place of use or point of diversion overlaps found.

Have updated mitigation conditions for this right to those currently used. SRBA recommendation of Rt. 63-31497 should be changed to mitigation use.

5. kwalker 9/23/2005 Mitigation Right

Comment: I discussed this proposed license with Lee Sisco, watermaster of WD63, this morning to find out if he had been limiting Rt. 63-00270 due to issuance of this permit. Lee stated that the use under Rt. 63-00270 was currently involved in a transfer changing the use of the right. The upper part of the ranch is being converted into a gravel pit according to Lee so there is no issue about Permit 63-12323 being mitigated for.

6. dnelson 6/19/2001 General Comments/Analysis

Comment: A mitigation plan has been proposed to retire 2 acres of ground from the Boise River Decreed right 63-00270 and use the water appurtenant to these acres to mitigate for the groundwater use for the 2 acres described in this application. The applicant has also amended their application to reduce the number of irrigated acres from 8 to 2 acres and their diversion rate from .16 cfs to .04 cfs. There are no significant overlapping rights for this permit except for Farmers Union Ditch Company water. The applicants consultant, Terry Scanlan, has informed me that they live on a small hill and can not receive any canal water without pumping it to the place of use.

7. dnelson 6/19/2001 1:11:35 PM Legal Notice Remarks

Comment: Mitigation is proposed for consumptive use.

Water bearing zone to be appropriated is from 50 to 150 feet.
