1. dave carlson 10/7/2004 Field Report Narrative

Comment: golden lake. three streams flow separately into a reservoir. west thurman creek, middle thurman creek and east thurman creek. they would join below the dam to form thurman creek. place of use would be in sections 15 and 22 of 12n 42e. Dam inspection reports show a capacity of 112 af at 41 acre surface area. Using arc view on the 1987 napp photo the surface area is 52 acres which would be about 142 af of storage.

5. kwalker 8/19/2005 Point of Diversion

Comment: In review of this licensing exam it was determined that the point of diversion should be located on the dam which collects water from West, East and Middle Forks of Thurmon Creeks. The source should also be shown as Thurmon Creek rather than all the forks since it is all Thurmon Creek water once it is dammed up.

9. kwalker 8/26/2005 Use of Water

Comment: Today I contacted Keith Hobbs of Harriman State Park and discussed the use of water to be licensed under this right. This right is currently listed as a recreation storage permit; however, in field exam of Permit 21-7184 it was noted that Golden Lake has restrictions of no boating, swimming or fishing. Mr. Hobbs confirmed this. He said the recreation use would be for the folks walking around the lake on a walking path and looking at the lake. Wildlife also use the lake but the correct description would be aesthetic storage since folks just admire the lake and the water in it for its beauty. Recommend we request a license amendment to change use to aesthetic storage.
