

MEMORANDUM

Date: June 27, 2005
To: Transfer 72008
From: kwilson
Re: Evaluation

This transfer proposes to add a point of diversion to bring the capacity of the irrigation system up to the licensed diversion rate. When the new point of diversion was drilled (as a replacement well) it was determined that the new well had been drilled in a different 1/4 - 1/4 than the original well thus necessitating the filing of this transfer. The applicant had a pump test conducted on the new well. The pump test results showed that it would require both wells to provide the total authorized under rights 29-2340 and 29-7031.

Authority to File:

The applicant has provided a warranty deed as evidence of ownership of lands irrigated under these rights, and the lien holder of the property has provided a notarized letter agreeing to this transfer.

Water Right Validity:

Both of the water rights involved in this transfer were recently decreed in the Snake River Basin Adjudication.

Injury to Other Water Rights:

No issues identified.

Enlargement of Use:

No issues identified.

Local Public Interest:

No issues identified.

Beneficial Use Conservation of Water Resources:

No issues identified.

Review of the application finds there is no clear inconsistency with criteria set forth in Section 42-222, Idaho Code preventing processing of this application.
