REFERENCE: 95-9275; SYLTE AND ROBERTS

We have reviewed the above named application to withdraw 0.03 cfs for domestic water (January 1 to December 31) and 0.06 cfs for irrigation (March 15 to November 15) from springs.

2 We have no specific objections; however, water lines and pumps are an encroachment in lakes and rivers, which can be detrimental to fish and fish habitat.

2 If a line and pump are placed in the creek and excavation is necessary, we recommend that applicants be required to install the lines during low water when underwater excavation will be minimized. Dug materials should be sidecast to only one side and the bottom contour and substrate restored. The pump should be screened to prevent entrainment of fish; the maximum screen mesh size should be 0.25 inches. In addition, pump approach velocities should not exceed 0.5 ft/second to prevent losses of juvenile fish. It would be preferable to place pumps on land rather than in the water.

The applicant should obtain necessary encroachment permits from Idaho Department of Lands before installing water lines and pumps in state waters.

Thank you for the opportunity to comment.
