RE: Permit Nos. 45-07567 and 45-07588

Dear Permit Holders:

The above referenced permits are being reviewed for licensing purposes. While reviewing these records we found we need more information to finalize this process.

Permit 45-07567: In review of records found in the book entitled "Hydrologic and Water-Quality Data for the Southwest Irrigation District's High Plains States Groundwater Recharge Demonstration Project, South-Central Idaho", we found you could divert 27.0 cubic feet per second (cfs) for your diversion to ground water recharge. However, because you only paid an examination fee for 20.0 cfs when you submitted your Proof of Beneficial Use, the license will be limited to 20.0 cfs. If you want this water right license to reflect the 27.0 cfs found by the Department, you must submit an additional examination fee of \$25.00, plus a late payment penalty of \$25.00, within 30 days. If we don't receive the additional examination fee/late fee of \$50.00 within 30 days from the date of this letter, we will assume you are not interested in the additional 7.0 cfs of water and we will license the permit for 20.0 cfs.

This letter will also act as confirmation of my telephone conversation with Mr. Wyatt on February 6, 2004, regarding conveyance loss in this system. I was advised that Southwest Irrigation District is not interested in pursuing documenting the volume of water lost in this system because the ditch is owned and operated by Cottonwood Canal Company. IDWR will not include a volume for conveyance losses in the proposed license.

IDWR also noted during our license review, that we will need an amendment form that will reflect the point of diversion as identified by our Snake River Basin Adjudication (SRBA) staff. Our SRBA staff actually stood on the cement works spanning the creek to GPS your diversion location so we feel confident that this point accurately describes your diversion location. Enclosed you will find an application for amendment form that needs to be signed and returned to this office so we can issue the water right license as reflected on the amendment form.

Page 2
Southwest Irrigation District
May 19, 2004

Permit No. 45-07588: This permit will also need to be amended before we can license it. Our examiner determined that the one of the points of diversion and some places of use are in locations other than shown on the permit. Enclosed you will find an amendment form that needs to be signed and returned for this permit.

Both Permits: It is noted that you submitted Applications for Amendment of both permits in February of 1997 that have never been acted upon. The applications for amendment were submitted to change the period of use authorized under these permits to a longer season. We did not act upon these amendments because the use of water may be enlarged if we approved the increase in the season of use. We request that you withdraw the amendments submitted in 1997 by submittal of a letter to this effect. If you will withdraw the previous amendment forms, we will utilize the fees submitted in 1997 to cover the filing fees of the enclosed amendment forms. If you don't wish to withdraw the amendments submitted in 1997, you must provide strong evidence showing that the season of use change requested will not injure senior water rights. If you choose not to withdraw the previous amendment applications the filing fee for each of the enclosed licensing amendments is \$50.00, for a total of \$100.00.

The Department will hold further action on these permits for 30 days to allow submittal of the required information, signed amendment forms and filing fees. Additional time may be granted by the Department upon receipt of a written request and sufficient justification for an extension. If you have any questions in regard to this matter, please feel free to contact me at (208) 327-7944.

Sincerely,

KAY WALKER
Sr. Water Resource Agent

License Review of Permit 45-7567 by kw 2/26/2004

Permit 45-7467 was issued on: 5/2/1985
Proof was submitted on: 6/4/1986
Permitted Season of Use: 3/1 thru 7/10

We have no records of the flow injected before 1993. Field examination completed in 1995. USGS report in folder 45-7467 contains the following information.

Weir #1 – 13088512

Year	Volume	Season Used	Inside permitted season of use?
1993	177 af	5/5 thru 5/22	Y
1994	0	0	
1995	593 af	1/26 thru 6/20	N
1996	1140 af	3/9 thru 5/31	Y
1997	1140 af	3/14 thru 6/6	Y

Weir #2 – 13088515

1993	552 af	3/26 thru 9/25	N
1994	251 af	4/5 thru 9/26	N
1995	971 af	4/1 thru 10/25	N
1996	761 af	4/5 thru 10/18	N
1997	531 af	3/25 thru 6/30*	Y

*report only quantifies information thru 6/30/1997

Permit holder filed an application for amendment in 1997 to increase the permitted season of use to year round season. No action has been taken on that amendment to date. If we were to approve the amendment it may cause an expansion of the water right. However, permit holders have been injecting water whenever there is water available. We have no records to indicate the season of use, rate or volume injected during the permit development period. Since we are licensing system based on 1997 volume and rate and they were within the permitted season of use that season, I recommend we license season of use as permitted.

HYDROLOGIC AND WATER-QUALITY DATA FOR THE SOUTHWEST IRRIGATION DISTRICT'S HIGH PLAINS STATES GROUNDWATER RECHARGE DEMONSTRATION PROJECT, SOUTH-CENTRAL IDAHO

By H.W. Young

Abstract

Hydrologic and water-quality data were collected from 1992 through June 1997 as part of the Southwest Irrigation District's High Plains States Groundwater Recharge Demonstration Project. The study area encompasses parts of northeastern Twin Falls County and parts of northwestern Cassia County in south-central Idaho. The data consist of measurements of depth to water, streamflow, and rates of injection; and analyses of water-quality characteristics.

INTRODUCTION

Hydrologic and water-quality data were collected as part of the Southwest Irrigation District's High Plains States Groundwater Recharge Demonstration Project. The data were collected from 1992 through June 1997 by the U.S. Geological Survey, in cooperation with the Southwest Irrigation District. The study area encompasses parts of northeastern Twin Falls County and parts of northwestern Cassia County in south-central Idaho (fig. 1). The recharge project comprised seven recharge sites that received water from three sources. Recharge sites 1 and 2 received water from Cottonwood Creek; recharge sites 3, 4, and 5 received water from Dry Creek; and recharge sites 6 and 7 received water from Murtaugh Lake.

Facilities at the 7 sites consisted of 13 injection wells and 1 infiltration pond; 2 streamflow-gaging stations (one on Cottonwood Creek and one on Dry Creek) equipped with continuous recorders; 9 observation wells, equipped with continuous recorders, for measuring water levels; 4 sites for sampling back-

ground quality of the injectate water; 10 wells for sampling background quality of the receiving aquifers; and 26 water-quality monitoring sites (including 11 injectate-water sampling sites and 15 receiving-aquifer sampling sites). The combined capacity of all 7 recharge sites was about 27,700 gallons per minute (61.5 cubic feet per second), or about 122 acre-feet per day.

Recharge summaries for 1992 through June 1997 are shown in table 1. A comparison of streamflow and recharge for Cottonwood and Dry Creeks is shown in table 2. Records of injection wells are shown in table 3.

The following data for the Cottonwood Creek area, Dry Creek area, and Murtaugh Lake area are displayed in separate sections beginning on page 5: maps showing the locations of data collection sites, hydrographs showing water-level fluctuations in observation wells, hydrographs showing water-level fluctuations in water-quality monitoring wells, tables of background water-quality data for injectate water and water in the receiving aquifers, tables of water-quality monitoring data for injectate water and water in the receiving aquifers, hydrographs and tables of mean daily streamflow for Cottonwood and Dry Creeks, and hydrographs and tables of mean daily rates of recharge at the injection wells and the infiltration pond.

U.S. GEOLOGICAL SURVEY NUMBERING SYSTEMS

Well-Numbering System

The U.S. Geological Survey in Idaho numbers well locations within the official rectangular subdivision of the public lands, with reference to the Boise base line and Meridian (fig. 2). For example, the first segment (11S) of site number 11S-20E-28DDC1 designates the township south (or north); the second (20E), the range east (or west); and the third (28), the section in which the site is located. Letters (DDC) following the section number indicate the site's location within the section and are assigned in counterclockwise order beginning with the northeast quarter. The first letter (D) denotes the 1/4 section (160-acre tract), the second (D) denotes the 1/4-1/4 section (40-acre tract), and the third (C) denotes the 1/4-1/4-1/4 section (10-acre tract). The last number (1) is a serial number assigned when the site was inventoried. Springs are denoted with the letter (S) in the last position.

Gaging-Station-Numbering System

Each gaging station has been assigned a number in downstream order in accordance with the permanent numbering system used by the U.S. Geological Survey. Numbers are assigned in a downstream direction along the main stream, and stations on tributaries between the main-stream stations are numbered in the order that the tributaries enter the main stream. A similar order is followed on other ranks of tributaries. The complete 8-digit number, such as 13088400, which is used for the station Dry Creek near Artesian City, includes the part number "13," indicating that Dry Creek is in the Snake River Basin, plus a 6-digit station number.

Figure 2. Well-numbering system.

Surface-water sites are assigned a 15-digit station number based on the grid system of latitude and longitude; for example, 473054116331600. The first six digits denote degrees, minutes, and seconds of latitude; the next seven digits denote degrees, minutes, and seconds of longitude; and the last two digits (assigned sequentially) identify sites within a 1-second grid.

Figure 1. Location of study area and data collection sites, south-central Idaho.

Table 2. Monitoring water-quality data for selected sites in the Cottonwood Creek area, 1993 through June 1997

Headnotes:

LOCAL IDENTIFIER	site name or number
AC-FT	acre-foot, acre-feet
COLS.	colonies
DEG C	degrees Celsius
DIS.	dissolved
ELEV.	elevation
FET	field endpoint titration
FT.	foot, feet
G/M	gallons per minute
INST.	instantaneous
K	nonideal colony count
MG/L	milligrams per liter
ML	milliliter
NGVD	National Geodetic Vertical Datum of 1929
TOT	total
US/CM	microsiemens per centimeter
WAT	water
WH	whole
0.7 UM-MF	pore size of filter—0.7 microgram, membrane filter method
—	no data available
<	less than
>	greater than

2. Monitoring water-quality data for selected sites in the Dry Creek area, 1993 through June 1997	75
3. Mean daily flow for gaging station 13088400, Dry Creek near Artesian City, October 1993 through June 1997.....	120
4. Mean daily rates of injection for gaging station 13088412, Dry Creek injection site 3 near Artesian City, 12S-20E-6BAC2, January 1994 through June 1997	124
5. Mean daily rates of injection for gaging station 130884125, Dry Creek injection site 3 near Artesian City, 12S-20E-6BBD3, January 1994 through June 1997	128
6. Mean daily rates of injection for gaging station 13088405, Dry Creek injection site 4 near Artesian City, 12S-19E-2ADC2, January 1994 through June 1997	132
7. Mean daily rates of recharge for gaging station 13088415, Parshall flume at infiltration pond site 5 near Artesian City, January 1993 through June 1997	136

Figure 1. Locations of data collection sites, Dry Creek area.

Figure 2. Water-level fluctuations in observation wells in the Dry Creek area, January 1987 through June 1997.

Figure 3. Water-level fluctuations in selected water-quality monitoring wells in the Dry Creek area, January 1992 through June 1997.

Figure 3. Water-level fluctuations in selected water-quality monitoring wells in the Dry Creek area, January 1992 through June 1997—Continued.

Figure 4. Streamflow in Dry Creek, October 1993 through June 1997.

Figure 5. Rates of recharge for site 3, Dry Creek area, January 1994 through June 1997.

Figure 6. Rates of recharge for site 4, Dry Creek area, January 1994 through June 1997.

Figure 7. Rates of recharge for site 5, Dry Creek area, January 1993 through June 1997.

Table 1. Background water-quality data for selected sites in the Dry Creek area, 1993 through 1996

Headnotes:	
LOCAL IDENTIFIER	site name or number
AC-FT	acre-foot, acre-feet
COLS.	colonies
DEG C	degrees Celsius
DIS., DISS, DISSOLV	dissolved
ELEV.	elevation
FET	fixed endpoint titration
FLT, FLTRD	filtered
FT.	foot, feet
GF 0.7U, 0.7U GF	pore size of filter—0.7 microgram, membrane filter method
0.7 UM-MF	instantaneous
INST.	nonideal colony count
K	milligrams per liter
MGL	milliliter
ML	National Geodetic Vertical Datum of 1929
NGVD	near
NR	recoverable
REC, RECOV., RECOVER	surrogate
SRG, SURROG, SURROGT	total
TOT	microsiemens per centimeter
US/CM	micrograms per liter
UG/L	unfiltered
UNFLTRD, UNFILT, UNF	water
WAT	whole
WH, WHL	less than
<	no data available
—

Table 2. Monitoring water-quality data for selected sites in the Dry Creek area, 1993 through 1997

Headnotes:	
LOCAL IDENTIFIER	
AC-FT	site name or number
COLS.	acre-foot, acre-feet
DEG C	colonies
DIS.	degrees Celsius
E	dissolved
ELEV.	estimate
FET	elevation
FT.	fixed endpoint titration
G/M	foot, feet
INST.	gallons per minute
K	instantaneous
MG/L	nonideal colony count
ML	milligrams per liter
NGVD	milliliter
TOT	National Geodetic Vertical Datum of 1929
US/CM	total
WAT	microsiemens per centimeter
WH	water
0.7 UM-MF	whole
—	pore size of filter—0.7 microgram, membrane filter method
<	no data available
>	less than
>	greater than

Table 1. Background water-quality data for selected sites in the Murtaugh Lake area, 1992 through 1996

Headnotes:	
LOCAL IDENTIFIER	site name or number
AC-FT	acre-foot, acre-feet
DEG C	degrees Celsius
COLS.	colonies
DIS., DISS, DISSOLV	dissolved
E	estimate
ELEV.	elevation
FET	fixed endpoint titration
FLT, FLTRD	filtered
FL.	foot, feet
GF 0.7U, 0.7U GF	pore size of filter—0.7 microgram, membrane filter method
0.7 UM-MF	instantaneous
INST.	nonideal colony count
K	milligrams per liter
MG/L	milliliter
ML	National Geodetic Vertical Datum of 1929
NGVD	recoverable
REC, RECOV., RECOVER	surrogate
SRG, SURROG, SURROGT	total
TOT	microsiemens per centimeter
US/CM	micrograms per liter
UG/L	unfiltered
UNFLTRD, UNFILT, UNF	volatile organic compound
VOC	water
WAT	whole
WH, WHL	less than
<	no data available
—

Table 2. Monitoring water-quality data for selected sites in the Murtaugh Lake area, 1992 through June 1997

Headnotes:

LOCAL IDENTIFIER	site name or number
AC-FT	acre-foot, acre-feet
COLS.	colonies
DEG C	degrees Celsius
DIS.	dissolved
ELEV.	elevation
FET	fixed endpoint titration
FT.	foot, feet
G/M	gallons per minute
INST.	instantaneous
K	nonideal colony count
MG/L	milligrams per liter
ML	milliliter
NGVD	National Geodetic Vertical Datum of 1929
TOT	total
US/CM	microsiemens per centimeter
WAT	water
WH	whole
0.7 UM-MF	pore size of filter—0.7 microgram, membrane filter method
—	no data available
>	greater than
<	less than
