Subject: Amy hydro project

Shelley --

Attached is the Excel file that summarizes PURPA power sales contracts.

According to the Amy contract, the term of the agreement is 35 years from the date the project first delivers energy to the utility. A Commission order in the contract file states that the project first delivered energy to Utah Power on December 31, 1986.

I can't find a copy of the FERC exemption in any of my files here. I was still at IDWR at the time the exemption was issued. I'm almost positive I would have had a copy of the exemption in my files at IDWR. Unless the files were thrown away, whoever inherited my files should have a copy. The FERC files could have gone to Warren Weihing, John Crockett, or Gerry Galinato. The files were organized in order of FERC project number. The project number for the Amy project was 8700.
